                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 뮍
This invention describes a novel nucleic acid (N1) encoding a Chlamydi pneumoniae protein (P1), given in the specification. The isolated nucl acid is useful for diagnostic and analytical methods, such as, hybridization-based assays or amplification-based assays. The protein be used for diagnostic purposes, for their enzymatic or structural activity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizing fragment of N1; (2) an isolated nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2761
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2500
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2701
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2401

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence encodes a Chlamydia antigen of the invention, designated CPN100634. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to drown regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard reaching to the protein should be used to produce the protein antigens they proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections.
                                                                                                                                                                1102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2784 BP; 803 A; 644 C; 573 G; 764 T; 0 other;

XX

CThis DNA sequence codes for the novel 90.0 kDa surface exposed CC protein Omp8 (see AAW88421) of the human respiratory pathogen CC Chlamydia pneumoniae. By generating antibodies against C. C pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) CC was obtained which reacted with outer membrane proteins. The CC cantibody was used to identify the genes (see AAX06816-27) encoding CC cantibody was used to identify the genes (see AAX06816-27) encoding CC cantibody was used to identify the genes (see AAX06816-27) encoding CC cantibody was used to identify the genes (see AAX06816-27) encoding CC cantibody was used to identify the genes (see AAX06816-27) encoding CC pneumoniae DNA. The genes are situated in 2 gene clusters:

CC comp4-comp15 proteins (see AAX88417-28) in an expression library of comp12,11,10,5,4,13 and 14 in one cluster and omp6,7,8,9 and 15 in CC the other, and encode polypeptides of about 89,6-100.3 kDa and CC cantibody and the code polypeptides of about 89,6-100.3 kDa and code polypeptides of about 89,6-100.3 kDa and CC captures of the test comprises detecting antibodies specific test for identifying mammals (including humans) infected with Chlamydia CC omp4-omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used CC in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids being particularly useful as DNA cc vaccines may also prevent atherosclerosis and bronchial asthma, CC vaccines may also prevent atherosclerosis and bronchial asthma, CC vaccines may also prevent atherosclerosis and bronchial asthma, CC which are possibly associated with C. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                             Q
                                                                                                                                                                                                                                                                                                                                                                                                                     В
                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        C PCR primers. The 5' primer contains a NotI restriction site, a ribosome the 98kDa putative outer membrane protein coding sequence close to the 5' end of the 98kDa putative outer membrane protein coding sequence. The 3' primer contains the sequence encoding the C-terminal sequence of the putative outer membrane protein and a BsrGl restriction site. The stop codon was c excluded and an additional nucleotide was inserted to obtain an in-frame C terminal fusion with the Histidine tag. The PCR product was closed cinto a eukaryotic expression vector (pCA-Myc-His) by restricting both the vector and the PCR product with NotI and BamHl and performing a Cliqution reaction. This expression vector was injected intramuscularly a chamydia pneumoniae. The chlamydial lung titers of the immunised mitce were lower than those of the controls. Thus the 98kDa putative outer common protein can be used as a vaccine to provide protection against C Chlamydia infections, especially Chlamydia pneumoniae infections. C C The polypeptide may also be administered orally to treat Chlamydia construction of attenuated Chlamydia starins that can over-express the construction of attenuated Chlamydia starins that can over-express the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC pneumoniae protein (P1), given in the specification. The isolated nucleic acid is useful for diagnostic and analytical methods, such as, CC hybridization-based assays or amplification-based assays. The protein may CC be used for diagnostic purposes, for their enzymatic or structural CC activity, or as a vaccine. The invention also describes (1) a probe CC comprising a hybridizes under stringent conditions to N1; (3) an expression CC (N2) that hybridizes under stringent conditions to N1; (3) an expression CC cassette comprising N1 under the transcriptional regulation of a CC transcriptional initiation region functional in an expression host, and a CC transcriptional termination region; (4) a cell comprising an expression CC cassette of (3) as part of an extrachromosomal element or integrated into CC cassette into the host cell, and the cellular progeny of the host cell; CC (5) a method for producing a P1 comprising growing a cell of (4) where CC proteins; (6) a purified polypeptide composition comprising at least 50 cm weight & of (1) and (7) a monoclonal antibody binding specifically to the

                                                                                                                                                                                                                                                                                                                               chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAX06816-27) encoding Comp4-omp15 proteins (see AAX0881417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Comp12,11,10,5/4,13 and 14 in one cluster and omp6,7,8,9 and 15 in the other, and encode polypeptides of about 96-100.3 kDa and Cabout 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for omp4-omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines may also prevent atherosclerosis and bronchial asthma,

                                                                                                                                                                                                                                                                                                                                                             This sequence encodes a Chlamydia antigen of the invention, designated CC CPN100634. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate encode according to standard recombinant DNA methodologies. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The infections. Chlamydia is a pathogen implicated in the development of infections. Chlamydia is a pathogen implicated in the development of disease (especially bronchitis and sinusitis, asthmatic bronchitis, adults.

(see AAW88431) of Chlamydia pneumoniae, a human respiratory pathogen. It is described as a subsequence of a claimed nucleic acid fragment (see AAX06819) encoding Omp7 (see AAW88420). The invention provides a new species specific test for identifying mammals (including humans) infected with C. pneumoniae. The test comprises detecting antibodies specific for surface exposed proteins Omp4 Omp15 (see AAX06817-28) or detecting nucleic acid fragments encoding them (see AAX06816-27), especially by PCR. The proteins are also used in the claim proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific outer membrane proteins of C. pneumoniae or nucleic acids encountermembrane proteins of S. pneumoniae or nucleic acids encountermembrane proteins of S. pneumoniae
                                                                                                                                                                                                                                                                                                                                                                                           Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28950
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
               The nucleic acids may be used for the recombinant production of the Chlamydia polypeptides (either in vivo or in vitro) according to standar recombinant DNA methodologies. The polypeptides may then be used to vaccinate against Chlamydia infections in mammals. Chlamydia, such as C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in atherosclerotic changes and asthma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids in samples (and therefore diagnose infections) and the proteins may be used as antigens for the production of antibodies that may be used to detect Chlamydia proteins

                              The nucleic acids may be used for the recombinant production of the Chlamydia polypeptides (either in vivo or in vitro) according to standa: recombinant DNA methodologies. The polypeptides may then be used to vaccinate against Chlamydia infections in mammals. Chlamydia, such as C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in atherosclerotic changes and asthma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids in samples (and therefore diagnose infections) and the proteins may be used as antigens for the production of antibodies that may be used to detect Chlamydia proteins
                                                                                                                                                                                                                                               P-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This DNA sequence codes for the novel 89.7 kDa surface exposed protein Omp7 (see AAW88420) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAX06816-27) encoding Omp4-Omp15 proteins (see AAW88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12,11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia neumoniae. The test comparates of absorting antibodic consists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antiquens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    outer membrane proteins of {\tt C.} pneumoniae or nucleic acids encoding these proteins
